 - 3 //** Mindset for Success
-

November is Lung Cancer Awareness Month

Lung cancer is the most common cause of cancer in the United States and worldwide, and smoking is the most common cause of lung cancer. In November, organizations and leaders across the U.S. stand together against lung cancer. With nationwide support, we can turn the tide against this type of cancer.

Introducing Success Stories— Real People, Real Transformation

We want to hear and share stories from our members who have overcome personal struggles and shine a light on the steps you took to transform and empower positive change.

If you have a story you'd like to submit please email us at marketing@uprisehealth.com. You can choose to be anonymous. We look forward to hearing from you and sharing your stories to inspire others.

Facts about Lung Cancer

A Very Prominent Cancer

Lung cancer makes up about 25% of all cancer deaths—more people die each year of lung cancer than colon, breast, and prostate cancers combined. The American Cancer Society estimates 236,740 new cases of lung cancer and 130,000 deaths by the end of this year.

Two Major Types

There are two major types of lung cancer: non-small cell lung cancer and small cell lung cancer. Non-small cell lung cancer makes up the most cases and grows slowly. Small cell is less common and spreads quickly.

Smoking is Deadly

Smoking is the most significant risk factor for lung cancer, contributing to up to 90% of lung cancer deaths, but it isn't the only factor. Other risk factors include secondhand smoke exposure, radon exposure, and occupational hazards (such as asbestos and uranium).

Common Symptoms

Symptoms of lung cancer include a cough that won't go away, coughing up blood, shortness of breath, chest pain, chronic hoarseness, and bone pain. If you have any of these symptoms, contact your doctor.

Screening is Available

Screening early and often, especially if you have risk factors for developing lung cancer, can save your life. More than 8 million Americans are considered high-risk for lung cancer and are eligible for annual CT scan screenings.

Read on for More Information

If you want more information and resources about lung cancer (or COPD), we have more for you to read on the Uprise Health blog:

ANOTHER CRITICAL LUNG DISEASE: COPD

COPD stands for chronic obstructive pulmonary disease, and it's the sixth leading cause of death in the U.S.

Like lung cancer, smoking is the primary cause of COPD, but 1 in 4 people with COPD have never smoked.

Air pollutants at home (secondhand smoke), fumes, and genetics can also cause COPD.

Symptoms include shortness of breath, wheezing, chronic cough, and chronic phlegm production.

COPD is sometimes preventable. It's important to not smoke (or quite smoking), avoid exposure to air pollutants, and get the flu vaccine yearly.

Your mindset—the beliefs that shape how you view yourself and your world— influences your thoughts, feelings, and behaviors. Mindset can mean the difference between success or failure and resilience or defeat. Mindset is a great predictor of our attitude and happiness, and there are multiple schools of thought when it comes to explaining how mindset works.

6 TIPS FOR CREATING A POSITIVE MINDSET

Here are a few steps to help you practice a positive mindset.

Recognize that your thoughts are powerful—Many of our thoughts are almost subconscious and move so quickly that we don't realize how they affect our mindset. If you're feeling frustrated, stop and take note of your thoughts. Are they based on fear or scarcity? Practice reframing your thoughts from your new mindset perspective.

Embrace change—Change is difficult for most people, yet it is inevitable and constant. Instead of thinking about what you've lost, think about how change can positively influence your life or pick one thing you're grateful for because of the change.

Face your fears—When you recognize you're afraid of something, stop and ask yourself one question: what is the worst that can happen? In many cases, the outcome is not nearly as terrible as what's living in your mind. Use the mantra, "Do it anyway," and you'll come out stronger on the other side.

Limit technology—Social media, 24-hour news, and constant ads can wreak havoc on our subconscious by promoting scarcity, fear, and problems with seemingly no solutions. Limiting your exposure will allow you to focus more on your thoughts and reframe them to align with your new mindset.

Practice mindfulness—Mindfulness will help you focus on the "now"—how you feel and think in the present. It will help you identify thoughts and choose gratitude for what you have.

Set small goals—We often focus on the big goals in our lives, but the smaller ones are more influential to a positive mindset. Choose two or three small things you want to change and celebrate the small wins.

Complete CBT-based exercises—CBT, or cognitive behavioral therapy, is the process of changing your thought patterns and developing healthy coping skills for problems. CBT-based exercises can help you create a new mindset from the comfort of your home.
